

Ex. No. 1	Design A Website Using HTML5
Date of Exercise	08/07/2026
GitHub Host Link	https://advaiithh.github.io/WEBTECHNOLOGYLAB/

Aim

To design and develop a simple and structured **Astrology & Horoscope Website** using HTML5 by implementing semantic HTML elements, headings, paragraphs, images, hyperlinks, tables, lists, forms, and basic CSS formatting.

Description

This experiment involves designing and developing a simple **Astrology & Horoscope Website** using HTML5. The webpage is created using the HTML5 document structure with essential elements such as <html>, <head>, <meta>, <title>, and <body>. The website is organized using headings, paragraphs, images, tables, lists, hyperlinks, and comments.

The webpage provides information about zodiac signs, horoscope predictions, lucky colors, lucky numbers, astrology terms, and daily astrology tips. Different types of hyperlinks such as internal, external, bookmark, email, telephone, and clickable image links are implemented for easy navigation.

A horoscope request form is included using HTML5 input elements. Basic internal CSS is used to improve the appearance of the webpage by applying suitable background colors, text colors, spacing, and table formatting. This experiment demonstrates the fundamental concepts of HTML5 webpage development and basic web designing.

Procedure:

1. Open Visual Studio Code (or any HTML editor) and create a new file named **index.html**.
2. Add the HTML5 document declaration (<!DOCTYPE html>).
3. Create the basic HTML structure using <html>, <head>, <meta>, <title>, and <body> tags.
4. Set the webpage title as "**Astrology & Horoscope Website**".

5. Create a header section with the website title and navigation menu.
6. Add headings and paragraphs describing astrology and horoscope.
7. Insert a clickable astrology image using the `<img>` tag.
8. Create a table displaying horoscope predictions for different zodiac signs.
9. Add a description list containing important astrology terms.
10. Create ordered and unordered nested lists for zodiac signs and lucky things.
11. Insert different types of hyperlinks including:
 - External hyperlink
 - Internal hyperlink
 - Bookmark link
 - Email link
 - Telephone link
 - Clickable image link
11. Divide the webpage into different sections using `<div>` elements.
12. Save the file and execute it using Live Server or any web browser.
13. Verify that all hyperlinks, images, forms, and tables are working correctly.
14. Upload the HTML file to GitHub.
15. Enable GitHub Pages and copy the hosted website link.

Program:

```
<!DOCTYPE html>

<html lang="en">

<head>

<meta charset="UTF-8">

<meta name="viewport" content="width=device-width, initial-scale=1.0">

<title>Astrology & Horoscope Site</title>

<style>

body {font-family:Arial,sans-serif;background:#f3ecff;color:#222;margin:20px}

h1,h2,h3 {text-align:center}

table {width:100%;border-collapse:collapse}

th,td {border:1px solid #555;padding:8px;vertical-align:top}

.section {margin:20px 0}

.footer {text-align:center;margin-top:20px}

</style>

</head>

<body>

<!-- Header -->

<div id="top">

Result

The **Astrology & Horoscope Website** was successfully designed and developed using HTML5 and basic CSS. The webpage includes semantic HTML elements, headings, paragraphs, images, hyperlinks, tables, nested lists, description lists, forms, and comments. All navigation links, images, and form elements function correctly. The website provides a simple, attractive, and user-friendly interface, successfully achieving the objectives of the experiment.
